TECHNIDRONE AERIS one

AERIS one is a light, portable aerial tool for industrial applications with medium format cameras with 1kg load capacity. Easy to use in manual mode as well as in programmed automatic missions via waypoints from a Ground Station with Google Earth, besides their collapsible arms make it easily transportable.

It includes carrying case, so you can carry everything you need in one pack.

FPV tripod monitor provides us with a right image display from the navigation camera or payload.

It has a 16-channel radio link with multiple switches available for the integration of new functions.

Built-in telemetry device able to be connected to a smartphone, tablet or laptop.

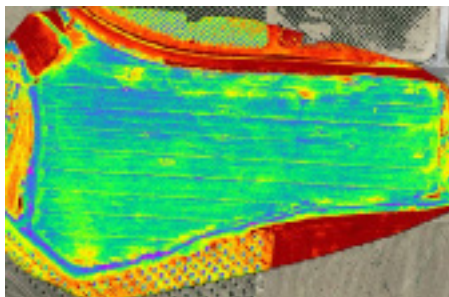

The high performance battery is capable of providing the Aeris one up to autonomy.
